

CUSTOM SOLUTIONS: CHEMICAL MANAGEMENT

With deep expertise in precision plastics manufacturing, we build custom solutions that combine the exact right materials, processes, and formats for your chemical management requirements.

CASSIOPEIA™ CUSTOM TUMBLER

Apex' custom tumbler stands out through durability and performance. We added two innovations to further level up its efficiency and extend the longevity of your investment:

APEX INNOVATIONS

1. The C.A.S.™ System

Excessive wear by the mechanical action of the tumbler combined with the caustic environment of the bath can take a toll on your equipment. Our solution: the Chemical Attack Shield (C.A.S.) System. At its core is a protective liner, which can be replaced in weeks instead of the months required to switch out or repair a worn tumbler.

2. The R.C.N.™ Kit

Cassiopeia tumblers can be configured with one or more R.C.N.™ kits to handle coupons, samples, and small parts at the same time as large parts in the primary tumbler basket.

Our team thrives on creating precise solutions for each Chemical Management challenge. Contact us for advice and resources to address yours: SOLUTIONS@APEXIND.COM | 866-304-2739
